Attachment I Process flow diagram (PFD)

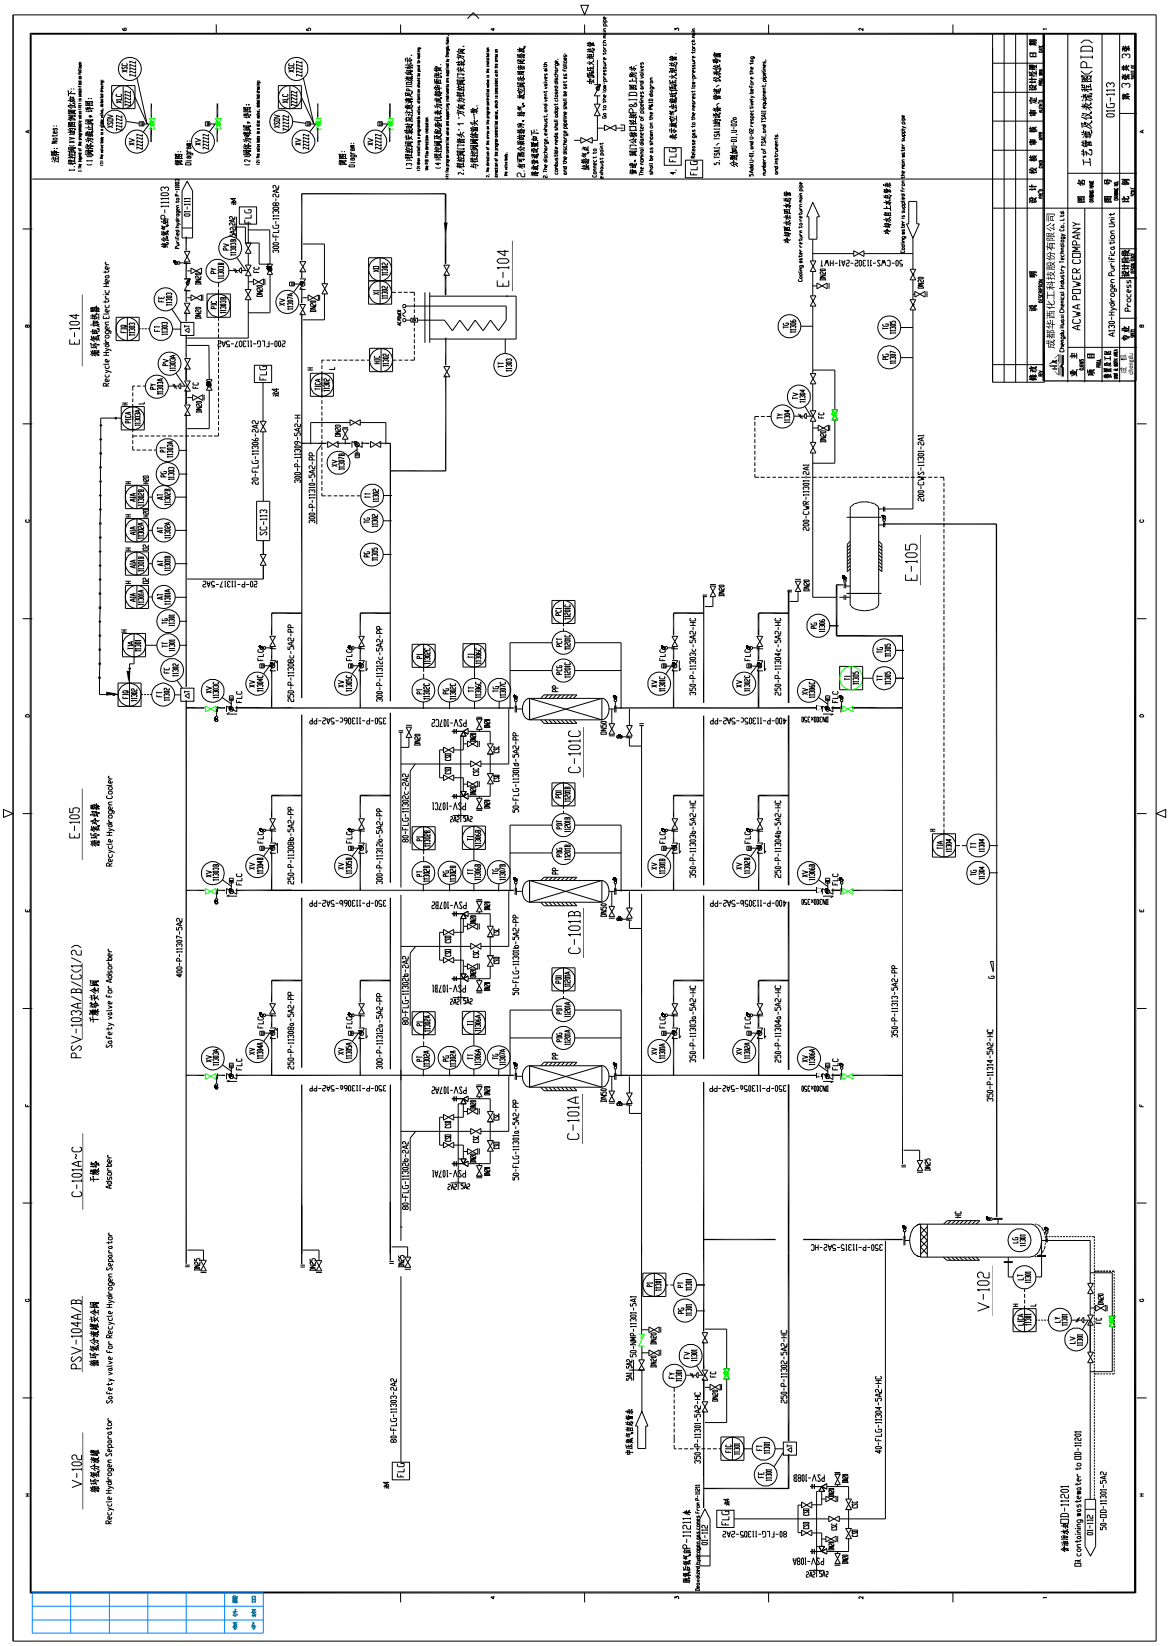

Product Hydrogen
Venting gas
Waste water
V-102 Recycle Hydrogen Separator
E-105 Recycle Hydrogen Cooler
E-104 Recycle Hydrogen Electric Heater
C-101A/B/C Adsorber
V-101 Feed Gas Separator
E-103 Feed Gas Electric Heater
E-102 Feed Gas Cooler
R-101 Deoxygenation Vessel
E-101 Feed Gas Heat Exchanger
C-101C
C-101B
C-101A
Circulating water
Feed gas
Waste water
Process Flow Diagram(PFD)
Hydrogen Purification Unit

Attachment II PID

ACWA POWER COMPANY
M120-Hydrogen Purification Unit
Process
R-101
V-101
V-103
E-101
E-102
E-103
PSV-102A/B
PSV-101A/B(1/2)
Feed Gas Heat Exchanger
Feed Gas Cooler
Feed gas electric heater
Feed Gas Separator
Safety valve for Feed Gas Separator
Deoxygenation Vessel
Safety valve for Deoxygenation Vessel
Cooling water is supplied from the main water supply pipe
Cooling water return to return main pipe
Release gas to the nearest low-pressure torch main.
Feed gas comes from P-11102
Connect to instrument users
Go to low-pressure torch main pipe
Connect to other users of TSAI system
Drain to the nearest drainage pipe
Compressed hydrogen is sent to P-11301
Compressed hydrogen comes from the main pipeline
Connect to compressed hydrogen pipeline
Drain to the nearest drainage pipe
Drain to the nearest drainage pipe
Drain to the nearest drainage pipe

Attachment III Equipment layout
